

STATUS: SUCCESSFULLY IMPLEMENTED

Testing Playground is a gated sandbox under Tools → Playground. Allowed testers upload the same file types as live tools, run a snapshot test, and download the expected output(s) — without changing Daily Runs, MAP, warehouse data, or the live FNSKU / Tracking Extractor apps.

WHAT IT DOES

Testing Playground lets selected staff verify Tools apps with real sample files in a personal sandbox. Each tool uses the same input types and pipelines as production, then returns a success/fail report and downloadable output(s) for that moment in time — without writing live history or touching Keepa / Daily Run data.

BUSINESS VALUE

- QA can prove FNSKU and Tracking Extractor still produce expected files
- Each tester (Stephanie, Sunshine, Orville, ...) works independently
- No risk to Daily Runs, MAP, warehouse catalog, or live tool history
- Shared pattern for adding more Tools to test later

HOW A TEST WORKS

Step	What happens
1. Add tool	Dropdown lists FNSKU Labels and Tracking Extractor; Add tool places a card in your personal test set
2. Upload	Same file types as the live app. File is pinned for that user until Replace or Remove (survives refresh)
3. Run test	Runs the live pipeline in sandbox mode. Shows Testing successful / failed with a date-time snapshot
4. Download	One button per expected type (Excel and/or PDF). Outputs clear on refresh — click Run test again

TOOLS AVAILABLE NOW

WHAT PERSISTS

Tool	Input → Output	
FNSKU Labels	CSV / XLSX / ZIP → Excel (.xlsx) + PDF	Uploaded file — stays across refresh until replaced/removed (per user email)
Tracking Extractor	PDF / ZIP → Excel (.xlsx)	Tool list — which tools you added to your personal set
		Run outputs — session-only; clear on refresh so each Run test is a fresh snapshot

WHO HAS ACCESS

User	Access
Allowlisted emails	stephanie@, sunshine@, remote@ (metroshoewarehouse.com), orvillebarba@gmail.com
Superadmins	Full Playground access
All other users	No sidebar link; /playground redirects to Dashboard

ISOLATION & SAFETY

Fixtures and selections are keyed by signed-in email

FNSKU runner does not write label history

Tracking runner does not save scan history to the server

Live Tools pages remain unchanged for all users

ROLLOUT CHECKLIST

Confirm Playground appears under Tools for allowed emails only	Add Tracking Extractor, upload a PDF/ZIP, Run test (may take longer for OCR)
Sign in as Stephanie / Sunshine / Orville and confirm personal header shows the correct account	Download Excel; confirm live Tracking Extractor history was not written
Add FNSKU Labels, upload a shipment CSV/XLSX/ZIP, Run test	Refresh the page: uploaded file remains; outputs gone — Run test again
Download both Excel and PDF; compare to live FNSKU Labels	Brief testers that Playground is sandbox-only and does not affect production runs

NOTES FOR LEADERSHIP

Shipped on web app version 3.1.1 (no separate Electron bump required for this feature)

Route: /playground · Sidebar: Tools → Playground

Future tools register a runner (same upload → run → typed download card) without changing production Tool pages

Micro Tools, Keepa Import, and Label Station are not in the picker yet
