

STATUS: SUCCESSFULLY IMPLEMENTED

Shipment Manager is a team Tools workflow under Tools → Shipment Manager. Staff register a shipment, upload Amazon FBA exports together, then compile WR SKU Update, PO Import, Order Import, and ledger sheets. Folders cluster related groups; stars pin follows for quick access.

WHAT IT DOES

Shipment Manager is the shared place to collect Amazon FBA exports for a warehouse run, keep each contributor’s file intact, and produce warehouse sheets without spreadsheet merge chaos. Related GRP shipments can be clustered into folders; each user can star what they need to follow.

BUSINESS VALUE

- One WR SKU Update for the team instead of conflicting copies
- Uploads stay removable without destroying other people’s rows
- Folder cluster compile for multi-GRP vendor runs in one click
- Checklist + status keep handoff visible across ops

HOW A SHIPMENT WORKS

Step	What happens
1. Register	Create a shipment with name, vendor, optional notes
2. Upload	Teammates add Amazon FBA Individual-units exports (.csv / .xlsx); each upload keeps its own rows
3. Compile	Generate WR SKU Update merges uploads and drops duplicate UPCs
4. Folder (optional)	Select related GRP shipments → create / move into a folder
5. Cluster	Folder action Generate Clustered WR SKU Update (pink) merges every member, still one row per UPC
6. Follow	Star a shipment or folder → appears in personal Starred section at the top

STATUS: SUCCESSFULLY IMPLEMENTED

Shipment Manager is a team Tools workflow under Tools → Shipment Manager. Staff register a shipment, upload Amazon FBA exports together, then compile WR SKU Update, PO Import, Order Import, and ledger sheets. Folders cluster related groups; stars pin follows for quick access.

OUTPUTS

Output	Scope
WR SKU Update	One shipment — one row per UPC
Clustered WR SKU Update	Entire folder — UPCs deduped across members
PO Import	Per upload (one PO / FBA id)
Order Import	Per upload + ship-to catalog
Ledger	Shipment summary + unique SKUs Excel

KEY RULES

Duplicate UPCs collapse only at compile time (per shipment or clustered folder)

Stars are personal; folders and shipments stay shared

Deleting a folder ungroups members — shipments remain

PO / Order Import stay per-upload (one FBA shipment each)

CAPABILITIES

Capability	Detail
Folders	Editable clusters; indent + tint for members; collapsed by default; up/down reorder
Stars	Per-user follows (not shared); Starred section mirrors liked shipments and folders
Vendor checklist	Per-vendor steps (e.g. NFA / SMW); who completed each step; superadmin edits templates
Status	Open → In progress → Ready → Closed (creator / admin)
UPC dedupe	Exact + numeric variants (leading zeros, dashes, .0) so Excel does not show the same UPC twice

WHO HAS ACCESS		DATA & MIGRATIONS
User	Access	shipments, uploads, sku_rows
Signed-in staff	Full Shipment Manager (non-warehouse)	shipment_folders + sort_order shipment_stars (per-user)
Warehouse-only stations	No access (not on warehouse allowlist)	Vendor checklist templates (DB overrides) Audit: upload, generate, folder, star actions
Shipment creator / admin	Can delete; creator sets status	
Superadmin	Edit vendor checklist templates	

ROLLOUT CHECKLIST

Confirm Shipment Manager under Tools for a normal staff account	Star the folder; confirm it appears under Starred (personal only)
Register a test shipment; upload two FBA exports; Generate WR SKU Update	Download Ledger; build PO Import / Order Import for one upload
Confirm unique UPC count drops duplicates across uploads	Run migrations: folders, sort_order, shipment_stars (Supabase SQL Editor)
Select GRP 1–3; Create folder; Generate Clustered WR SKU Update	Warehouse-only login: no Shipment Manager sidebar entry

NOTES FOR LEADERSHIP

- Shipped on web / desktop app version 3.5.1 (folders, stars, clustered generate landed with 3.5.x)
- Route: /shipment-manager · Sidebar: Tools → Shipment Manager
- Requires Supabase migrations for folders / sort_order / stars before those UI features work in production
- Does not replace FBA Box Contents (carton detail → box workbook) or Freight Class
- Does not touch Keepa jobs, Daily Runs, MAP, or warehouse Label Station
