NFA and SMW Tool

Implementation summary — MSW Overwatch

MetroShoe Warehouse
October 2026 · App v3.7.2

STATUS: SUCCESSFULLY IMPLEMENTED

NFA and SMW Tool lives inside FBA Box Contents. It turns a North Face or Smartwool carton dump into a Box Contents and Dimensions workbook, corrects that Output against the Amazon manifest, and builds a Carton Numbers workbook from several carton files or one zip. Allowlisted users and superadmins only.

WHAT IT DOES

One panel for North Face and Smartwool carton files. Staff download the Box Contents workbook, correct it against the Amazon manifest, and number every carton without re-keying.

BUSINESS VALUE

NFA and SMW share one converter instead of two spreadsheets

UPCs stay text so Excel does not turn them into scientific notation

Manifest Compare makes Output quantities match Amazon

A zip of carton files becomes one Carton Numbers workbook

HOW A RUN WORKS

Step	What happens
1. Open tool	Sidebar BC Tools → FBA Box Contents, then expand NFA and SMW Tool (allowlisted + superadmin only)
2. Build the Output	Upload the carton dump. The server numbers each Carton#: as Box Number 1, 2, 3… and downloads {filename} Output.xlsx
3. Compare	Upload that Output and the Amazon manifest. Old SKUs are remapped. Missing units are added to the last box.
4. Carton Numbers	Upload the same carton files, or a zip. Each shipment becomes its own sheet.

JOBS AT A GLANCE

Job	Input	Output
Output workbook	Spaced-column carton dump starting with PO#:	Box Contents + Dimensions (Weight from the Total row as text)
Manifest Compare	That Output file plus Seller Central Box packing information	Corrected workbook. Shortfalls go on the last box, in yellow.
Carton Numbers	Several carton files, or one .zip of them	One workbook. One sheet per shipment, with Box Number 1, 2, 3…

OUTPUT WORKBOOK

The shared converter for a spaced-column carton dump. Internally this is Tool #2. OBZ and DNK stay on their own panels.

Item	Detail
API	POST /api/v1/fba-box-contents/generate-tool2 (audit: fba_box_contents.generate_tool2)
Input	First row PO#: and the shipment id. Blank spacer columns sit between Sku, UPC, Qty, Weight, and carton dimensions. Each carton is Carton#:, then item lines, then a Total row.
Box Contents	UPC as text, Box Number and QTY as numbers, and a Sum of QTY pivot. No Total QTY footer.
Dimensions	Weight copied from the Total row as text (often with a leading space), then Length, Width, Height. No Box # column.
Download	{filename} Output.xlsx, for example FBA19PLBV097 Output.xlsx

MANIFEST COMPARE AND CORRECT

Sits on the same panel, above Carton Numbers. The Amazon file decides the quantities. The Output is adjusted to match.

Item	Detail
API	POST /api/v1/fba-box-contents/compare-tool2 (audit: fba_box_contents.compare_tool2)
Files	1. NFA and SMW Output.xlsx (Box Contents + Dimensions). 2. Seller Central Box packing information.xlsx. The manifest is the source of truth.
Old SKUs	Output UPCs and Amazon ids are looked up in the Old SKUs catalog so a remapped UPC still matches the manifest.
Corrections	Missing quantity is added to the last box and highlighted yellow. Extra quantity can be removed. The download name ends in corrected.

CARTON NUMBERS

Uses the same carton files as the Output. Several files, or one zip, become a single workbook of box numbers.

Item	Detail
API	POST /api/v1/fba-box-contents/generate-carton-numbers
Upload	.xls, .xlsx, or .zip. Up to 100 files. A zip may be up to 50 MB; a single Excel file follows the 15 MB upload limit. Other files inside a zip are skipped.
Sheets	One sheet per shipment, named by its FBA id, in the order the files were uploaded. Each shipment can be uploaded once.
Columns	Original Carton (the Carton#: barcode, kept as text) and Box Number 1, 2, 3... in the order the cartons appear. The box count must match the file's Total Ctns footer.
Download	Carton Numbers.xlsx. It sits below Manifest Compare and Correct on the page.

WHO HAS ACCESS

User	Access
Allowlisted emails	sunshine@, stephanie@, paolo@, paulo@, johnbernard@ (metroshoewarehouse.com)
Superadmins	Full FBA Box Contents access, including this tool
All other users	No sidebar link. The page and the API are blocked.

TECH NOTES

UI: FbaBoxContents.tsx · route under FBA Box Contents

Output and compare: fba_box_contents.py

Carton Numbers: fba_carton_numbers.py

Old SKU remap reads the catalog during Manifest Compare

Tool #1 (generic FBA Carton Detail) stays in code and is hidden

KEY RULES

Do not run an NFA or SMW file through the OBZ or DNK panels

Dimensions weight is text copied from the Total row, not a rounded number

Manifest Compare adds missing units to the last box only

Carton Numbers rejects a second upload of the same shipment

ROLLOUT CHECKLIST

- [ ] Confirm FBA Box Contents under BC Tools only for allowlisted emails and a superadmin
- [ ] Output: upload a PO#: spaced dump. Check Box Number, the pivot, and Dimensions weight as text
- [ ] Compare: Output plus the Seller Central manifest. Confirm an Old SKU remap and a yellow last-box add
- [ ] Carton Numbers: several carton files, then one zip of the same files. One sheet per FBA id
- [ ] Reject a .csv and an empty file. The page shows the server's error instead of a blank download
- [ ] A user who is not allowlisted has no sidebar entry, and the API returns restricted

NOTES FOR LEADERSHIP

Current app version 3.7.2. The tool is part of FBA Box Contents, not a separate sidebar item.

Path: BC Tools → FBA Box Contents → NFA and SMW Tool

Three downloads: the Output workbook, the corrected compare file, and Carton Numbers.xlsx

Does not print labels. Carton labels are a separate job in Label Center.
