

STATUS: SUCCESSFULLY IMPLEMENTED

Product Catalog Formatter is a BC Tools converter under BC Tools → Product Catalog Formatter. Staff upload Amazon shipment-plan files or a WR SKU Update workbook and download one PRODUCTS catalog with unique UPCs (UPC, SKU, fnsku, STYLE NAME, Condition).

WHAT IT DOES

Product Catalog Formatter merges Amazon shipment-plan exports or WR SKU Update workbooks into one warehouse-ready PRODUCTS catalog. Repeated UPCs collapse to a single row (first wins), so Label Station and catalog imports get a clean unique-UPC file without spreadsheet cleanup.

BUSINESS VALUE

One PRODUCTS workbook instead of hand-merging Amazon dumps
Unique UPCs — first row wins across multiple uploads
Works from raw shipment plans or Shipment Manager WR SKU Update
Columns match Label Station / catalog import expectations

HOW A FORMAT WORKS

Step	What happens
1. Open tool	Sidebar BC Tools → Product Catalog Formatter (BC Tools allowlist + superadmin)
2. Choose mode	Use Shipment plan or WR SKU Update (separate uploads on the same page)
3. Upload	Drop or browse one or more .xlsx / .xlsm / .xls / .csv (max 30 files, 15 MB each)
4. Format	Server merges rows, extracts barcodes, and keeps the first row for each UPC
5. Download	Receive Product Catalog Formatter.xlsx (sheet PRODUCTS); Clear to start over

OUTPUT SHEET

Column	Source
UPC	Barcode (shipment plan) or UPC column (WR)
SKU	SKU
fnsku	FNSKU
STYLE NAME	Title (plan) or Description (WR)
Condition	Condition (plan) or always New (WR)

KEY RULES

Max 30 files / request · 15 MB each · 100,000 rows / file
Accepted: .xlsx / .xlsm / .xls / .csv
Dedupe by UPC (case-insensitive); later copies dropped
Shipment plan and WR modes stay separate — wrong headers fail

MODES AT A GLANCE

Mode	Input	Mapping
Shipment plan	Amazon shipment-plan export (SKU + UPC/EAN/ISBN/JAN/CODABAR)	UPC from barcode column (label stripped); SKU / FNSKU / Title / Condition
WR SKU Update	WR SKU Update workbook (exact SKU, UPC, FNSKU columns)	UPC / SKU / FNSKU as-is; STYLE NAME from Description; Condition = New

SHIPMENT PLAN MODE

Amazon shipment-plan sheet with preamble, then a SKU table. Download filename: Product Catalog Formatter.xlsx.

Item	Detail
API	POST /api/v1/product-catalog-formatter/format (audit: catalog_formatter.format)
Required headers	SKU + a UPC-like column (e.g. UPC/EAN/ISBN/JAN/CODABAR)
Barcode rules	Prefer UPC over EAN/JAN/ISBN/CODABAR; strip UPC: / EAN: labels; reject scientific notation
Excel types	UPC, SKU, and fnsku forced as text (@) so leading zeros stay intact
Skipped	Shipment summary preamble, box-size footer, blank rows, rows with no usable UPC

WR SKU UPDATE MODE

Same PRODUCTS output from a WR SKU Update produced by Shipment Manager (or equivalent). Item / carton dimensions are not carried into the catalog.

Item	Detail
API	POST /api/v1/product-catalog-formatter/format-wr-sku (audit: catalog_formatter.format_wr_sku)
Required headers	Exact SKU, UPC, and FNSKU (shipment-plan barcode column is rejected here)
Style / condition	STYLE NAME from Description (or STYLE NAME / Title); Condition always New
Excel types	Plain digit UPCs without a leading zero as integers; leading-zero UPCs stay text
Left out	Item and carton dimension columns from the WR sheet

WHO HAS ACCESS

TECH NOTES

User	Access	
BC Tools allowlist	sunshine@, stephanie@, paolo@, paulo@, johnbernard@ (metroshoewarehouse.com)	UI: ProductCatalogFormatter.tsx (two independent upload sections) Sidebar gate: bcToolsAccess.ts API auth: signed-in require_app_access (no separate allowlist on the endpoint)
Superadmins	Full Product Catalog Formatter access	Stateless convert — no DB table required Rate limit: 20 uploads / hour
All other users	No sidebar link under BC Tools	Response headers report file / row / duplicate / skip counts

ROLLOUT CHECKLIST

Confirm Product Catalog Formatter under BC Tools for allowlisted emails + superadmin

Shipment plan: upload 2+ Amazon plan files; Download; open PRODUCTS sheet

Verify unique UPC count; duplicates removed; leading zeros kept

Confirm UPC:/EAN: labels stripped from barcode cells

WR SKU Update: upload a WR workbook; confirm Condition = New and dimensions omitted

Reject a shipment-plan file on the WR upload (wrong headers)

Non-allowlisted user: no BC Tools sidebar entry

Audit log shows catalog_formatter.format / format_wr_sku

NOTES FOR LEADERSHIP

Shipped on web / desktop app version 3.6.2 (shipment-plan + WR SKU Update modes)

Route: /product-catalog-formatter · Sidebar: BC Tools → Product Catalog Formatter

Complements Shipment Manager (WR SKU Update compile) — this tool turns those sheets into a PRODUCTS catalog

Output columns align with Label Station / warehouse catalog imports

Does not touch Keepa jobs, Daily Runs, MAP, or FBA Box Contents
